About Smart Thermostats

A smart thermostat is a modern electronic thermostat that learns from your habits and preferences to eliminate wasted energy.

Smart thermostats reduce energy costs while keeping your home comfortable. Features can include:

- Sensors to tell if the home is occupied so heating and cooling adjusts automatically.
- Ability to learn habits and temperature preferences so programming to set schedules is unnecessary.
- Remote control of home systems through smartphone apps.
- Analysis of historical electric usage data to find new ways to save energy.

Call a Clark Public Utilities energy counselor during business hours at 360-992-3355 with questions or to learn more.

Rebates are available for homes with a heat pump or electric furnace.
