About Solar Energy Systems

- Solar energy systems allow customers to generate a portion of the electricity they consume at their home or business while still remaining on the utility grid.
- Clark Public Utilities offers Net Metering for qualified interconnected solar systems; this billing design credits solar generators at the retail rate for 100% of their solar energy generation (whether it's used at the home/business or delivered back to the grid).
- Solar energy is 100% renewable.
- Check with a certified accountant to learn more about potential federal and state tax benefits related to the installation of a renewable energy system.

To learn more about the solar energy and related Clark Public Utilities programs speak to one of our team members by calling 360-992-3355.

Low-interest financing is available for the installation of qualified residential systems, subject to credit and home equity eligibility.
