Temporary Services

Metered temporary service

This service can be used for residential, commercial and multifamily applications. A metered temporary service requires an electrical inspection prior to connection by Clark Public Utilities.

The customer is responsible for:

- ▶ Providing the meter base, conductor and paneling based on the size of service needed.
- ▶ Grounding the service according to the NEC.
- ▶ Calling the local governing office and requesting the electrical inspection.

Once the service has passed inspection and the trench is backfilled by the customer, Clark Public Utilities will connect the service and set the meter. The customer will receive a one-time charge for connection of the service and monthly billings for electrical use.

Call our Construction Services department at (360) 992-8558 or contact your Clark Public Utilities representative for current pricing of temporary services.
